

Take Medicine Seriously

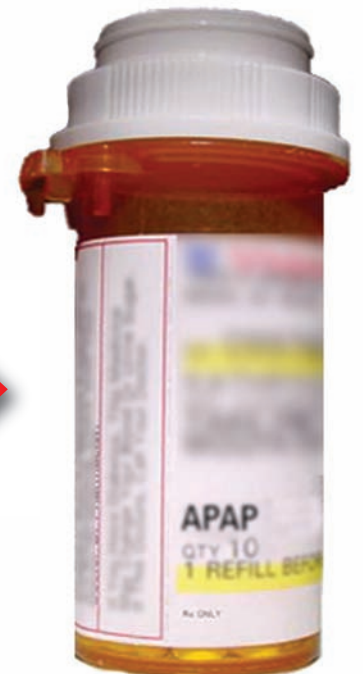

Always Read the Label

Identify the active ingredient

- Do not take more than the recommended dose
- Do not take more than one product containing the same active ingredient

Prescription drugs containing acetaminophen are sometimes labeled APAP. APAP is an abbreviation for acetaminophen. Do not take more than one acetaminophen-containing product. Talk to your doctor if you are unsure.

Check your other medicines:

Make sure they do not contain the same active ingredient.

Products containing:

Acetaminophen* (APAP)

Important: Many prescription and nonprescription products contain the same medicine. By combining these products, you may be getting more than the recommended amount of medicine. Therefore, you should not take more than one product containing ibuprofen, naproxen, aspirin or acetaminophen.

When a prescription drug contains acetaminophen, the label will read acetaminophen or the abbreviation, APAP. Always read the label and if it is unclear, ask your doctor or pharmacist.

*This is not a complete list. There are many other nonprescription and prescription medications that contain acetaminophen or an NSAID (ibuprofen, naproxen or aspirin) as the active ingredient. Also, some brands listed above have products that do not contain acetaminophen or an NSAID. The third-party trademarks used herein are trademarks of their respective owners and not McNEIL-PPC Inc.
